

In our continued efforts to bring the most advanced technology available to our patients, Eye Care of Claremore is pleased to provide the Optomap retinal exam as an integral part of your eye exam today.

This non-invasive procedure allows your doctor to see a much broader and more detailed view of the retina that is not always seen with dilation and conventional methods.

The Optomap Retinal Imaging helps in the diagnosis and management of systemic diseases of the eye such as macular degeneration, glaucoma, retinal holes and detachments, melanomas and diabetic retinopathy.

We want all patients to have a digital image of the retina annually with this scanning digital imaging system. The fee is **\$39.00**. This screening is not covered by most insurance plans; however, if retinal disease is found the subsequent testing will be submitted to health insurance.

**Advantages of the Optomap Retinal Exam:**

- A complete, thorough view of the entire retina is captured quickly and easily without dilation.
- Screens for retinal disease.
- Retinal image becomes a permanent part of your medical record.
- No blurred vision and no light sensitivity for the patient because dilation is usually unnecessary in order to obtain retinal images.

Please let the technician know if you have any questions that we can answer prior to this exam.
